

Seminar 3

week 3 (17 -23 October 2017)

A. We continue the Discussion of the Lab-Assignment 2 implementation:

1. Discussion how the programs ASTs are directly encoded in the main method. Please write some examples (you can use the Lab-Assignment 2 examples for discussion).
2. Discussion of PrgState implementation, namely the implementation of one of those 3 ADTs. For example we can discuss ADT Stack: our interface `MyIStack<T>`, our class `MyStack<T>` implemented based on `java.util.Stack<T>` .
3. Discussion of other questions/problems which have arisen.

B. Discussion about generics: wildcards, bounded wildcards, raw types. Please discuss some of the examples from `generics-examples.pdf` (ideally all of them, if you have enough time).
